CrossTec Corporation Announces New Version of SchoolVue

*Popular Classroom Management Software Adds New Features,
Enhancements and is “Better than ever!”*

Boca Raton, Florida, July 07, 2008 – CrossTec Corporation announces its latest version update of CrossTec SchoolVue® classroom management software. SchoolVue version 10 is a complete solution that keeps teachers in control of classroom technology at all times. SchoolVue is rich with new and enhanced features that provide educators with the ability to instruct, monitor, and interact with students individually, as a pre-defined group or to the overall class. Many of SchoolVue’s new and enhanced features are unique to classroom management software, and the whole package is known for its ease of use.

“SchoolVue is better than ever and sets a new standard for classroom management software. This is undoubtedly the most impressive product release since the category was first introduced a decade ago,” says Turner Dean, VP Sales of CrossTec Corporation. “Classroom management software originated as a simple monitoring and show tool for teachers. This latest SchoolVue solution is a comprehensive set of teaching tools for teachers, learning tools for students and support tools for technology managers.”

CrossTec SchoolVue is the first classroom management solution to integrate a unique Tech Console. Dean explains, “A great classroom management solution is not simply about providing the right tools for each teacher. Equally important are tools to ensure all computers in the school can be managed and maintained centrally so they are always available for teaching, and *without the added cost* of separate software for IT management.”

Also new to version 10 and specifically designed to enhance the student learning experience, is SchoolVue’s Journaling feature. “This is a tool that makes learning easier for the student, and promotes learning comprehension and ease of data retention,” Dean says. “SchoolVue’s new Journaling feature provides a complete record of the information covered during a lesson, including teacher notes, selected screenshots, and websites, survey results, as well as, the student’s own dynamic in-class notes.” Dean goes on to say, “With Journaling, SchoolVue brings invaluable benefit to the students, it’s not just simply a set of management tools for the teachers anymore.”

CrossTec SchoolVue version 10 was showcased at the National Educational Computing Conference June 29 – July 2 in San Antonio, Texas and the NSBA Teaching + Learning Conference, October 28-30 in Seattle, Washington and is immediately available for evaluation and purchase. For a free 30-day evaluation copy please visit <http://www.crosstecsoftware.com/tryit.html>. Annual maintenance subscribers will automatically receive SchoolVue v10 for no additional cost.
